The Operator was in the process of building a marcellus well pad. The Department observed E/S violations on site. The operator did not have any E/S controls on site at the time of this inspection. The operator had disturbed approximately 2+ acres prior to this inspection without implementing any E/S controls. The Operator is responsible for the E/S control plan and shall contain the following: 1.) A written depiction of the location and type of perimeter and onsite BMP's used BEFORE, during, and after the earth disturbance activity. 2.) A sequence of BMP installation and removal in relation to the scheduling of earth disturbance activities, PRIOR TO, during, and after earth disturbance activities. |

The Department observed a pit liner that was not structurally sound. The liner had been torn and the hole was approximately 6 feet long. The pit will need to be drained and its contents will have to be handled in accordance with Department regulations. The well site was prepared within 100 feet of a stream identified on a 7 1/2 minute USGS map. The Operator failed to obtain a waiver for the 100 ft distance restriction. |

| 1870563 | ENERGY CORP OF AMER | 03/16/2010 | Routine/Complete Inspection | 059-25211 | SKIB 4MH | Yes | Oil & Gas Location | Primary Facility | EP DOGO SWDO Dstr Off | Greene | Jefferson Twp | Violation(s) Noted | The Department was at the above referenced Marcellus Well to conduct a Routine Inspection. Its appears that 3 Marcellus wells have been drilled and are in production on this well pad. The Department observed violations at the site. A contractor was on site and had excavated a ditch across the entire pad to drain the surface water that was building up on the back of the pad. The water being discharged was causing accelerated E/S. The E/S controls were overwhelmed when all the water was directed to one area. The muddy water was flowing over the silt fence and directly into a tributary down gradient. The cut side of the well pad is extremely unstable and multiple slides have occurred causing the soil to reach the drilling pit which does contain flow back water and other drilling compounds.. |

| 1895957 | ENERGY CORP OF AMER | 06/02/2010 | Complaint Inspection | | | No | | Client | EP DOGO SWDO Dstr Off | | | Violation(s) Noted | The Department was at the above referenced stream crossing to conduct a complaint inspection. The Department observed multiple violations at the stream crossing location. There was no permit and no E/S plan posted on site. The Operator did not implement erosion and sedimentation BMP's to minimize the potential for accelerated erosion and sedimentation. The E/S plan was not adequate. The construction sequence in the E/S Plan could not be properly followed by the contractor. The Department did not observe any E/S Controls on the pipeline, did not observe any permanent controls such as water bars and the site should have been immediately seeded and mulched. A typical was included for the installation of silt fence but had no detail and was not part of the construction sequence. |

| 1933188 | ENERGY CORP OF AMER | 12/01/2010 | Complaint Inspection | 059-25268 | PENNECO/MORROW 2MH | Yes | Oil & Gas Location | Primary Facility | EP DOGO SWDO Dstr Off | Greene | Whiteley Twp | Violation(s) Noted | The Department was at the above referenced Marcellus Well to conduct an inspection after receiving a complaint in regards to frac water being spilled over the site. The Department met the land owner on site and he explained the situation. The Department also spoke with Contractors and the Operator in regards to the pollution incident. A Contractor was pumping and treating flow-back/frac water and in the process, lost approximately 5 barrels of contaminated water. The water spilled on site and ran over the fill side of the site reaching the silt fence. The Contractor on site placed straw bales down gradient of the spill to mitigate the contamination. The Contractor was also going to excavate any soil that may have been contaminated by the spill and place in roll-off containers to be hauled to the landfill. The site is sliding on the opposite side from the spill. Sediment has gotten through the E/S controls and needs to be addressed. The site needs to be stabilized as soon as possible. |
